

In 2016, Haven for Hope residential and courtyard patient increases were even higher than in prior years with patients treated growing by 31%, patient visits by 24%, and procedures by 28%.

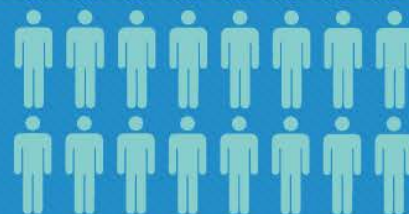

The growth in clinical care is due to efficiencies in the areas of patient intake, discharge, quality assurance, workflow alignment, and real-time management on the clinic floor. Patient care coordination begun in 2015 was refined as were protocols for primary, urgent, and preventive care.

One of our greatest achievements was the growth of our community clinics held in partnership with Greater San Antonio Hispanic Dental Association, San Antonio District Dental Society, and the San Antonio dental Hygienists' Association. In an effort to streamline care, hygiene cleanings and education were delivered the first day and dental procedures were delivered the second day.

Serving our Heroes focused once more on underserved Bexar County veterans, while Smiles of Hope focused on low-income and homeless Bexar County adults who are not current patients of the clinic. Together, 322 volunteers treated 286 patients with a combined service value of \$262,689.
